## NON-INVASIVE TISSUE TIGHTENING

The innovative treatment with the Profi Plasma Pen doesn't have any side effects. This special device is able to clear away excess skin in a safe and controlled way, by using ionized gas. It removes sagging skin parts and tightens the affected skin areas. The treatment is implanted WITHOUT any direct skin contact.

The Plasma (necessary for the regeneration and the creation of collagen) is caused by the contact of the top of the Plasma Pen on the skin (1-2 mm over the skin). This type of treatment is therefore perfectly suitable for thinner skin on the eyes. Applying this method of treatment and in comparison with other technologies, the skin won't be damaged. The generated plasma lightning jumps from the top of the device onto the skin and causes the evaporation on the surface over a very tiny point (only a few micrometers long). The affected point tightens the skin in its immediate surroundings. Different points are introduced. Thanks to the diversity and structure, those points are able to equalize excess skin. This procedure enables a careful and effective tissue tightening of, for example, upper-and lower eyelids, wrinkles, inner thighs or upper arms.

### TREATMENT AND EFFECT:

The result – A firm skin, very natural and it doesn't look like a mask! The treatment duration depends on the size of the affected area and varies between 30 and 90 minutes.

During the treatment you might feel some warmth and perhaps a pluck. After the treatment there might be a slight swelling, a mild ache or a slight burning. The possible swelling disappears after 2-3 days. After a view days a small scab is formed but it also disappears after 5-7 days. During the healing process you can notice a skin tightening and clear skin regeneration.

Thanks to the innovative Plasma technology, we are able to tighten considerably the tissue without any side effects, without pain and in a fast and natural way.

Feel free to make an appointment for a consultation.
